

Every peso collected, receipted, and accounted for.

One system for PTA dues, penalties, collections, official receipts and financial reporting — built specifically for Philippine schools, and for the people who actually sit at the collection table.

Per-school data isolation

Official numbered receipts

Append-only audit trail

Asia/Manila daily cut-off

● How collections run today

- Hand-written receipts from a booklet, with no reliable way to trace a number back to a payment.
- Balances re-computed by hand each time a parent asks “magkano pa po ang balance ko?”
- Nobody knows the day’s total until someone adds up the stubs at 5 PM.
- The masterlist lives in one spreadsheet, on one laptop, owned by one officer.
- When an officer’s term ends, the records — and the context — leave with them.

● How they run on this system

- A payment is recorded once and the receipt prints with a school-scoped number.
- Balances are derived live from the charges — there is no figure to keep in sync.
- Today’s collection, per cashier, is on screen while the queue is still moving.
- The masterlist is imported once and shared by every officer with a login.
- Turnover is an access change, not a handover of notebooks.

What the school gets

1

Student masterlist

LRN and student number tracked per section and school year. **Import your existing spreadsheet as CSV** — the batch is staged, previewed, then applied in full or not at all.

2

Fees & assessment

Define annual PTA dues and any other fee type, then **assess an entire school year in one action**. Re-running only catches students who were missed — never double-charges.

3

Collections & receipts

Record a payment, let it allocate against the oldest outstanding charges, and **print an official receipt** numbered per school — 0NHS-2026-000001.

4

Penalties, by rule

Late penalties are configured once and applied by the system, so **the same rule reaches every parent** — no case-by-case judgment at the table, no arguments about fairness.

5

Outstanding balances

Who still owes, and how much, **by student, section, or fee type** — computed from the actual charges and payments every time it is asked, so it can never go stale.

6

Reports & exports

Daily collections, cashier reconciliation, outstanding, fee-type breakdown and the **annual PTA report** — on screen, printable, and exportable to CSV for Excel.

STEP 1

Set up the school

School year, sections, and the officers who need access — each with the role their job actually requires.

STEP 2

Import the masterlist

Upload the CSV you already keep. Errors are shown before anything is written; nothing lands half-imported.

STEP 3

Assess the dues

Set the PTA dues and fee types for the year and assess every enrolled student in one pass.

STEP 4

Start collecting

Cashiers record payments and print receipts. Treasurers watch the totals and pull the reports.

Controls that protect the officers

✓

Overpayment is refused by the system, not by a form. A payment can never exceed what is actually owed, no matter who is encoding it.

✓

Voided are whole-payment, with a mandatory reason. The receipt number is retired and never reissued, so a cancelled receipt can always be explained.

✓

The audit log cannot be edited or deleted — not by a treasurer, not by the school administrator, not by us. It only ever grows.

✓

The day ends at midnight in Manila. A 7:30 AM payment counts for today, so the drawer and the daily report agree.

✓

Your school's data is isolated in the database itself. Other schools on the platform cannot read it — the boundary is enforced below the application, not by a filter someone might forget.

✓

Revoking access is instant. When an officer's term ends, their very next click is already denied.

Who can do what

ROLE	PERMITTED
Administrator	Everything in the school — fees, students, users, reports, voids.
Cashier	Records payments and prints receipts. Cannot void a payment.
Treasurer	All reports and exports, and may void a payment with a reason.
Viewer	Read-only — for a principal or an auditing parent-officer.

Runs on what you have

Nothing to install. Officers sign in with their Google account on a school laptop or a phone at the collection table. Receipts and reports print to whatever printer is already in the office.

INCLUDED FROM DAY ONE

• Masterlist import

• Your school's logo on receipts

• Prior-year opening balances

• Officer training

• Receipt format setup

• Support through the school year

4

Roles, so a cashier never holds an administrator's powers

5

Report views, from the daily count to the annual PTA report

0

Stored balance figures that can drift out of date

109

Automated tests guarding the money rules on every change

Let's run one school year, side by side.

We will import your current masterlist, set up this year's dues, and let your treasurer collect on both the notebook and the system for a week. If the totals do not match to the peso, we fix it before you commit to anything.

TO ARRANGE A DEMO

0920 394 4795

Scoped on purpose. The system deliberately does not do credit balances or cash refunds, and does not cancel single lines out of a receipt — a payment is voided whole and re-encoded. These are the rules that keep a collection ledger defensible when it is reviewed, and they are the same rules a hand-written booklet is supposed to follow.
